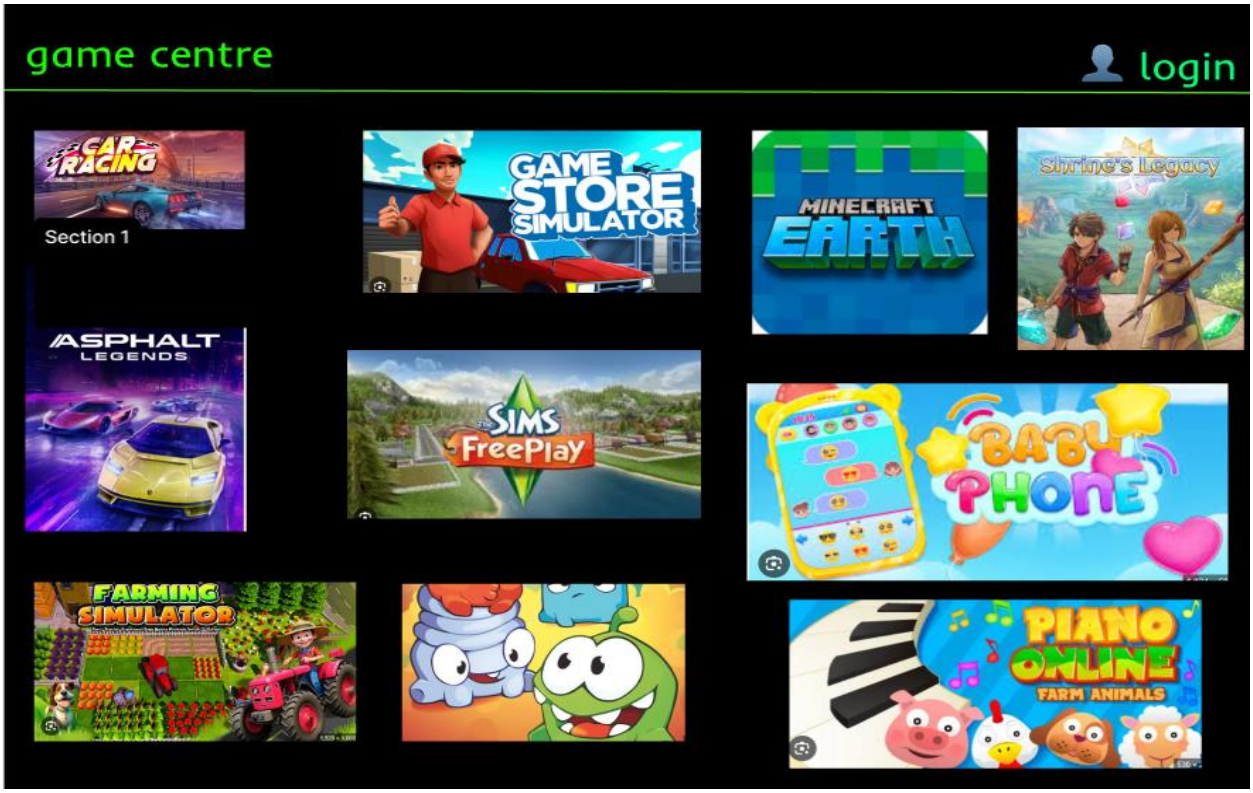
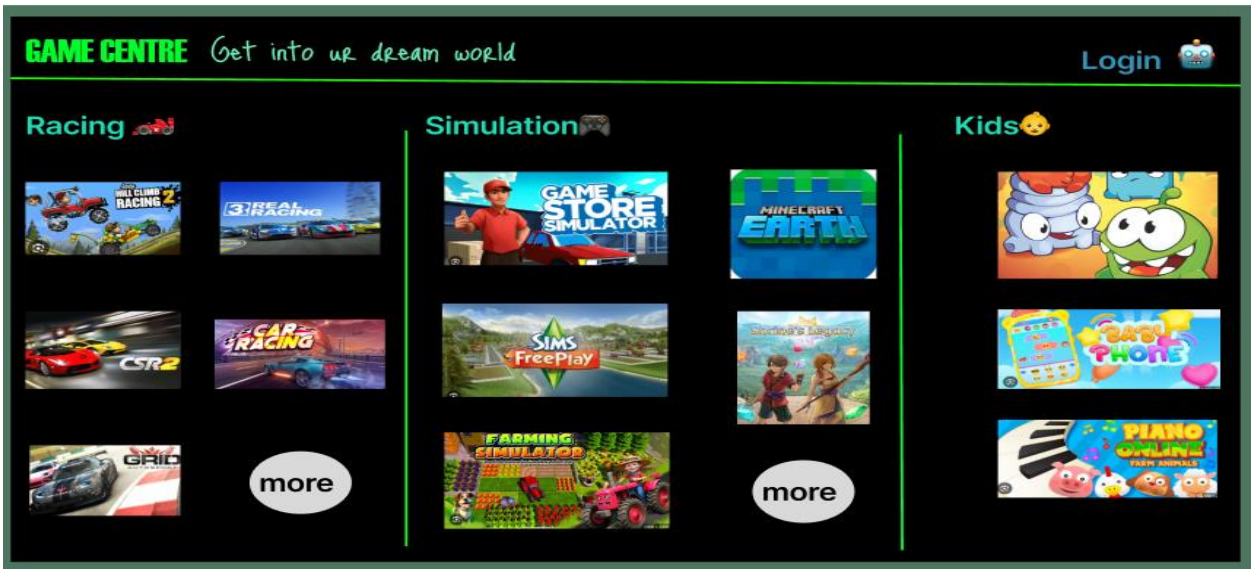
User Interface Design

Bad Design:



- The design doesn’t contain a proper alignment.
- The design doesn’t have any option to navigate.
- The design looks like it doesn’t completed yet.
- No navigation buttons are there.

Good design:



- There is a proper alignment.
- There are separate categories of games easy for the user to choose.
- Unlike bad model it has the simplified UI which looks neat and clear.

- The user can go through the category they wanted without searching it on the group of all categories like in bad design.
